

TIPS FOR FENCE PAINTING

Prior to the start of the painting, we recommend the following steps be completed to keep your yard and other areas paint splatter free during the painting process. The painting crews take their time and try their best to prevent over-spray from occurring, but having your property ready helps stop any extra paint from finding its way into unwanted areas.

- Bring all furniture, play equipment, and moveable potted plants as far away from the fence as possible
- Place painters plastic along the inside side of the fence, stretching it across the fence line to prevent paint from coming into your yard
- Cover any plants or unmovable items that are close to the fence
- Make sure all vegetation that overhangs the fence is cut back
- Keep animals and children away from the fence when crews are working
